

Resume

1. **Main Position:** Business intelligence database development engineer

2. **Name of the person :** FALINIRINA ANDRIANJAFY Christian

3. **Internship and Training:**

<i>Institution (Dates: start – end)</i>	<i>Diploma(s) obtained</i>
■ 1995: ENI Fianarantsoa	■ IT engineer
■ 1989: University of Fianarantsoa	■ Master's degree in Mathematics
■ 2000: CNETMAD	■ Bac+2 Management
■ 2000: Internship in France:	Web page development
<i>Place :</i>	Angers France
<i>Customer :</i>	ImasterNet
<i>Main lines of the project:</i>	Web Page Development
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Contributed to the setting up of the Angers Journal web page, ANGERS (FRANCE) ■ Contribute to the establishment of the E-Book page (Internet book sales). ■ Creating frequently used libraries

4. **Affiliation to professional bodies:**

- Association of Computer Engineers

5. **Others formations :**

- Programmer (CPI Information Professional Course – 1991)

6. **Main experiences**

- Network Administrator
- Client/server RDBMS design and development engineer
- Development of decision support tools
- Data Warehouse
- Web page development (Full Stack: Front end and Back End)
- Geographic Information System (GIS)
- Former

7. **Experience in IT environment**

- ~ METHODS: CI/CD
- ~ LANGUAGES: C++, PHP, PASCAL, JavaScript,
- ~ Database Management
 - ~ SQL: MySQL, PostgreSQL,
 - ~ NoSQL: MongoDB
- ~ Full Stack Web developer
 - ~ Design: Tailwind, Bootstraps, Flexbox, CSS Grid, FramerMotion
 - ~ React using: Vite, Typescript, Prettier, ESLint, Redux, Next JS, ReactRouter
 - ~ NodeJS using: express, NestJS
 - ~ GraphQL: Postgraphile, Prisma
 - ~ PHP: Laravel framework, codeIgniter

- ~ Others: JQuery/AJAX~
- ~ Mobile Application development
 - ~ React Native
- ~ Desktop development
 - ~ Delphi~
- ~ GIS (Geographic Information System):
 - ~ Map creation QGIS Desktop
 - ~ Web server: QGIS Web Server
- ~ Web client: Lizmap, QWC2~

8. Country of professional practice:

- Madagascar
- France

9. Language skills (good, average, poor):

Language	Understanding	Expression	Writing
French	Excellent	Excellent	Excellent
English	Good	Good	Good

10. Professional experiences :

From to	Employer	Job
1995 to present	Independent consultant	■ Database development engineer
2001 - 2023	Permanent consultant X ² Z Geographic Information System Field	■ Full stack WEB Development ■ Full stack WEB Mapping (QGIS, QGIS Serveur)
2008 to present	Consultant FIDA Madagascar PADANE, PHBM, AROPA, PROSPERER, FORMAPROD, AD2M	■ Full stack mobile Development ■ Database development engineer
2019 to present	Permanent consultant Cabinet LEESOTECH	■ Founder of the firm ■ Manager ■ Sales and Marketing Manager

11. Highlights and recents works:

■ **API for Automatic Detail Master Input Mask**

During the completion of an IT platform contract for the management of AD2M activities which must include around a hundred input masks, create software to automatically create input masks while

- Editing a data dictionary table that requests the data type; the form component (Widget), source list; list field, list code for component type drop-down list
- Editing the master detail relationship table which requests the master table, the detail table, key field in the master table, foreign key field in the detail table

A simple call to create mask (master table) allows you to open

- The list of data from the master table
- Edit button for each line
- Add button to go to the corresponding input mask
- Tabs per detail table allowing you to display the corresponding table and also allowing you to modify and add data on the details

■ **Data warehouse and reporting system**

Create with the LEESOTECH firm a data warehouse on desktop (With DELPHI) and online with CodeIgniter PHP allowing

- Database consolidation
- Allowing you to assist users in creating queries themselves
- To record SQL to facilitate the implementation of predefined and parameterized queries requested by users

■ **Quality control of Orthophotoplans**

With the X2Z firm; Create Desktop software (With DELPHI) for radiometric quality control and metric precision of Orthophotoplans. As responsible for developing the software necessary for controls, I created modules allowing

- Read the tiff image header to find out the tiff type and how to read the pixels in the image. (TAG, STRIP)
- From the RGB value of each pixel, output the averages of Red, Green and Blue, the standard deviation
- Determine image brightness
- Determining the existence of image blur
- From the coordinate of the center and the size of each image, automatically calculate the percentages of overlap between neighboring images horizontally and vertically and display in MapInf
- From the center coordinate, study the trajectory of the flight
- Automatic report of images validated or not based on brightness criteria, non-existence of blurs and percentages of overlap compared to neighboring images

■ **Design and production of in-house multi-agency accounting software**

Current existing accounting software is not compatible with Malagasy taxation. The company SCIM Madagascar asked me to create compatible software that allows it to follow the requirements of the General Tax Directorate which changes all the time. The company SCIM Madagascar decides to manufacture a home-made software tailor-made for their activity and compatible with the requirements of the General Directorate of Taxes in Madagascar without permanent assistance from the developers.

The software created makes it possible to

- Create documents (a database) which are exercises by agency
- Enter accounting entries with on-the-fly lettering; control button automatic lettering based on invoice number, manual lettering assistant
- Take out newspapers, general ledger, balance, VAT and much more
- Other types of declarations that may be adjusted or configured according to the requirements of the tax department in Madagascar

12. Highlights Project Sheet

<i>Name of project mandate:</i>	1. INFORMATION PLATFORM FOR MANAGING AD2M ACTIVITIES
<i>Description</i>	Design and development of databases on the support of producer organizations such as CEP (agricultural school fields), MPV, (micro-project for vulnerable AUE (Association of Water Users), AUP (Association of Users track), OPC (Peasant Organization for Marketing), Group for Environmental Protection Reporting system and dashboard (desktop and online)
<i>Year :</i>	2023
<i>Location:</i>	Morondava Madagascar
<i>Customer:</i>	AD2M FIDA MADAGASCAR
<i>Position held:</i>	Full Stack Development Engineer
<i>Description of my task</i>	■ Establishment of the IT platform for support activities for rural producers ● Online databasesupport activities for rural microenterprises ● Mobile database to collect data on field activities ● Database of itinerant operators (product collector)
<i>PostgreSQL</i>	■ Database system to centralize data on support activitiesto rural producers
<i>JS main node (Express)</i>	■ Database server application. This server application was used by the front-end web interface and the mobile application
<i>Mobile React Native</i>	■ A mobile application allowing you to enter data on field activities. The data will be saved in the server database once the tablet is connected to the Internet via the backend application
<i>Front End ReactJS</i>	■ Web interface enabling data entry for permanently logged in users
<i>PHP Laravel,</i>	■ Data warehouse ● Data warehousing to respond to requests and dashboard performance indicator ● • Implementation of dashboards and introduction of SQL to determine periodic values by indicator ● • Establishment of the needs requested by the client and programming of the results in the form of a table, graph and integration into the platform ● • Development of an interface that helps users formulate their own requests without programming
<i>Cartographic PostGIS, QGIS client, QGIS server</i>	■ Implementation of cartographic needs by the client and development of maps, posted online by the consultant and integration into the platform via a post menu

Name of mandate or project	2. IT PLATFORM FOR MANAGING PROSPERER ACTIVITIES
<i>Description</i>	Design and development of databases on the support of producer organizations such as CEP (agricultural school fields), MPV, (micro-project for vulnerable AUE (Association of Water Users), AUP (Association of Users track), OPC (Peasant Organization for Marketing), Group for Environmental Protection
<i>Year :</i>	Reporting system and dashboard (desktop and online) 2020
<i>Location :</i>	Antananarivo
<i>Customer :</i>	PROSPER FIDA MADAGASCAR
<i>Position held :</i>	Development engineer
<i>Description of my task</i>	■ Establishment of the IT platform for support activities for rural producers ● Database of support activities for rural microenterprises ● Database of support activities for producer organizations (association and group) ● Database of itinerant operators (product collector) ● Data warehousing to respond to requests and dashboard performance indicator ● Setting up dashboards and introducing SQL to determine periodic values by indicator ● Establishment of the needs requested by the client and programming of the results in the form of a table, graph and integration into the platform ● Development of an interface that helps users make their own requests without programming ● Implementation of cartographic needs by the client and development of maps, posted online by the consultant and integration into the platform via a post menu ■ Assistance, maintenance and upgrade according to procedural changes ■ Training of new recruits

Mandate name	3. Quality control and certification of ortho photo plans in the region of Vakinakaratra, Amoronimania, Menabe Madagascar
<i>Project source</i>	Thanks to funding from MCA (Millennium Challenge Account), aerial images are produced by a French company IGN. The X2Z firm was responsible for controlling these images. I am recruited as a consultant within X2Z
<i>Year:</i>	2007
<i>Location</i>	Antananarivo
<i>Customer:</i>	MCA (Millennium Challenge account)
<i>Main lines of the project:</i>	Radiometric quality control and metric precision of Ortho photo plans
<i>Position held:</i>	Responsible for developing the software required for controls Responsible for cartographic designs
<i>Description of my task</i>	Develop software allowing:
<i>Language</i>	■ Read the TIFF image header to know the TIFF type and how to read the image pixels. (TAG, STRIP)
<i>PASCAL object</i>	■ From the RGB value of each pixel, we bring out the averages of red, green and blue, the standard deviation and the brightness of the image
<i>IDE (integrated development environment)</i>	■ By calculation from the census of the pixels making up the image ● Give the brightness value ● Determine the contrast ● Report the existence of blurred parts in the image
<i>RAD DELPHI</i>	
<i>Database</i>	■ From the coordinate of the center and the size of each image, automatic calculation as a percentage of the overlap between neighboring images horizontally and vertically and display in MAPINFO
<i>ACCESS</i>	
<i>Cartographic</i>	■ Study the flight trajectory from images ■ Create an image database and ■ Image mapping in MAPINFO allowing overlaps to be noted ■ Creation of an interface in DELPHI for the visualization of the MAPINFO project
<i>MAPINFO</i>	■ Automation report of all orthophotos ● List of validated images ● List of images without brightness ● List of images with blurred parts ● List of images that do not have 10% overlap with neighbors

4. DESIGN AND PRODUCTION OF MULTI-AGENCY ACCOUNTING SOFTWARE

Name of the project :

Year

2023

Location

Tamatave

Customer

SCIM Madagascar

Position held

Database Engineer

Work :

Accounting software compatible with Malagasy legislation whose functionalities are:

Development language and framework

Language

PASCAL object

IDE (integrated development environment)

RAD DELPHI

Database

PostgreSQL

- Creation of the accounting entry mask
- Automatic editing of the A-News magazine
- Output of the accounting journal all or by period, by date range, by accounting code (AN, AC, VE, etc.) or by account
- Application during entry, automatic application based on invoice number and wizard to facilitate manual application
- Exit from general ledger all or by period, date range, journal code (AN, AC, VE, etc.) and account,
- Grouping of data from all organizations with a head office
- Tax declarations relating to executives established by the DGE (Malagasy Directorate General of Taxes) include:
 - VAT (value added tax)
 - Declarations such as immobilization, disbursements, goods sold, services sold, local products, purchases for resale, exports
 - Auxiliary balance; General balance
 - Automatic Backup Tool

13. 24 Others Work accomplished which best illustrates the ability to carry out the assigned tasks:

Name of the project :	1. DESIGN AND DEVELOPMENT OF A DATABASE DESKTOP INTERFACE
	■ Medical Expenses Database ■ Database of service providers and suppliers ■ Mission management
Year	2009
Location :	Antananarivo
Customer :	PROSPER IFAD
Position held :	Development engineer
Work	For the three software ■ Analyse of needs. ... ■ Strategic planning. ... ■ Architectural design and layout. ... ■ Software programming. ... ■ The test. ... ■ Deployment or delivery phase. ... ■ User training ... ■ Interview ...

Mandate name	2. GEOPORTAL OF INFRASTRUCTURES AND EQUIPMENT
Year :	2023
Location :	Antananarivo
Customer :	MTP (Ministry of Public Works Madagascar)
Position held : work :	Database Engineer
PHP Laravel jQuery Ajax	■ Creation of the input mask to enter questionnaires by type of infrastructure ■ Creation of a tool allowing the automatic creation of an input mask by type of infrastructure from questionnaires ■ Rebuilding a relational database from the Q&A database ■ Development of an interface that helps users make their own requests without programming
QGIS Desktop QGIS Server QGIS Web Client	■ Establishing query requirements, the result of which is presented in the form of a table and/or graph ■ downloading and integrating maps made with QGIS into the platform via a menu ticket

<i>Name of mandate or project:</i>	3. Development and maintenance of databases and support from Family Agricultural Businesses (EAF), Producer Organizations (PO), and Rural Youth
	Desktop reporting system and dashboard (Windows) Assistance, Maintenance and Upgrade according to changes in procedures
<i>Year :</i>	2017 - July 2019
<i>Place :</i>	Antananarivo
<i>Customer :</i>	FORMAPROD (IFAD)
<i>Position held:</i>	Database developer
<i>Description</i>	■ Updating Home software to meet new needs of system Users ● Monitoring-evaluation software ● Database of activities on EAF, Young ● Data warehouse with flexible queries and predefined queries

<i>Name of mandate or project:</i>	Development of the Geographic Information System on the in-depth Monograph of the ANALAMANGA Region
<i>Year :</i>	2017-2018
<i>Place :</i>	Antananarivo
<i>Customer :</i>	International Chamber of Commerce of Antananarivo
<i>Position held:</i>	Developer
<i>Description</i>	■ Data Entry Systems Programmer ● Input mask, ● Excel import, ● interfacing with existing databases ■ Creation of the data warehouse ■ Creation of the reporting system ● Query Wizard (Soft Queries) ● Parameterized queries ● Predefined queries ■ Automation of indicator calculation ● Appreciation and orientation indicator ● Status indicator ● Monitoring and control indicator

<i>Name of mandate or project:</i>	4. Training on Basic Commands and Programming in LINUX for Staff of the General Directorate of Meteorology
<i>Year :</i>	2017
<i>Place :</i>	Antananarivo
<i>Customer :</i>	Ministry of Transport and Meteorology
<i>Position held:</i>	Former
<i>Description</i>	At the end of the training, participants were able to: ■ Understand how the LINUX system works, ■ Master basic commands ■ Program command sequences ■ Automate common and frequent tasks ■ Administer and manage network under LINUX

<i>Name of mandate or project:</i>	5. Online database and mapping of the monitoring and evaluation system
<i>Year :</i>	2015
<i>Place :</i>	Antananarivo
<i>Customer :</i>	Ministry of Water and Sanitation
<i>Position held:</i>	Database and web sig developer
<i>Description</i>	■ Collection of information on the monitoring and evaluation system, ■ Design of an integrated database ■ Website development ■ Creation of dynamic maps and posting of maps online

<i>Name of mandate or project:</i>	6. Cluster Database
<i>Year :</i>	2014
<i>Place :</i>	Antananarivo
<i>Customer :</i>	PROSPER Analamanga
<i>Position held:</i>	Database Developer
<i>Description</i>	■ Cluster information: Building a Data Warehouse from Databases ● Cluster, ● Miro-Enterprise (MER) ● Producers' organization (PO), OM and contract register ■ Output of queries for multi-Cast: ● Set up a predefined and flexible search system for MER members of OP, MER which has already obtained contracts, Inventoried in the database of MER (BDMER) and MER ■ Export to Muti Cast software: ● Entering SMS: Subject, Content ● Selection of MERs using the warehouse ● Report

<i>Name of mandate or project:</i>	7. CPGU Dashboard
<i>Year :</i>	2011-2012
<i>Place :</i>	Antananarivo
<i>Customer :</i>	Prevention and Emergency Management Unit (CPGU)
<i>Position held:</i>	Database Developer
<i>Description</i>	■ Monitoring of risk reduction and disaster activities for prevention: Construction of a dashboard in Logical Framework form, including indicators which are classified into: ● The overall and specific objective, ● Expected results and activity to manage the project ● Activity. ■ Emergency management: Design of an Expert system based on risk rules by examining hypotheses in order to signal imminent dangers ■ Set up a reporting system restoring and disseminating results in different formats: ● Multi-dimensional crosstab ● Graph ● Map (GIS)

<i>Name of mandate or project:</i>	8. Programming the management of the nutrition sector database in Madagascar
<i>Year :</i>	2010
<i>Place :</i>	22 Regions
<i>Customer :</i>	National Nutrition Office (ONN)
<i>Position held:</i>	Database Developer
<i>Description</i>	■ Build an integrated system of the central system, which will ensure the centralization of data from regional sub-warehouses via the Extranet from which end users draw decision-making information with restitution and analysis tools. ■ Design a multi-document management module (Multi Database) with merger-type consolidation possibilities. The system thus designed will prevent possible confusion during the introduction of data during transfer ■ Design a module to build the dashboard of the monitoring and evaluation system, including the indicators which are classified by: ● Global and specific objective, ● Strategy and expected result, ● Activity. ■ Set up a reporting system restoring and disseminating results in different formats: ● Multi-dimensional crosstab ● Graph ● Map (GIS)

<i>Name of mandate or project:</i>	9. Implementation of a computer application for the management and monitoring of activities in Paysannat
<i>Year :</i>	2010
<i>Place :</i>	Antananarivo, Fianarantsoa, Antsirabe, Ambatofinadrahana, Toliara
<i>Customer :</i>	BIONEXX
<i>Position held:</i>	Database Developer
<i>Description</i>	Database development for: ■ Budgeting ■ The cost tracking system ■ Visualization of the management of dry matter purchases by farmer ■ Calculation of services for relay farmers and nurserymen ■ Monitoring of expenses made in relation to the budget allocated to each center of expenditure ■ Monitoring farmers at all levels (from registration to purchasing dry materials) ■ Monitoring developments in time and space ■ Monitoring over time and summary of the evolution of product quality (artemisinin level) ■ Monitoring of equipment movements

<i>Name of mandate or project:</i>	10. Setting up the SUIVI DEX Database
<i>Year :</i>	2010
<i>Place :</i>	Antananarivo
<i>Customer :</i>	TOTAL MADAGASCAR HEADQUARTERS
<i>Position held:</i>	Database Developer
<i>Description</i>	■ Budget monitoring ■ Monitoring of Materials / Equipment ■ Project evaluation ■ Follow-up of administrative documents

<i>Name of mandate or project:</i>	Establishment of the Database for the Dematerialization of the Moramanga land service
<i>Year :</i>	2010
<i>Place :</i>	Moramanga
<i>Customer :</i>	MORAMANGA LAND SERVICE
<i>Position held:</i>	Database Developer
<i>Description</i>	■ Development of land book entry mask and analytical slip ■ Quick search tool for titles and borders ■ Automatic exit from legal situation ■ Other rapid decision-making tool

<i>Name of mandate or project:</i>	11. Development of Total Ihosy Store Management software
<i>Year :</i>	2008
<i>Place :</i>	IHOSY
<i>Customer :</i>	TOTAL IHOSY STATION
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Entry/Exit Stocks ■ Shop Entrance/Exit ■ Sales recording and CA calculation in relation to the recorded sale ■ Store inventory and turnover calculation compared to inventory ■ Comparison in CA ■ Verification reports and Decision Tools

<i>Name of mandate or project:</i>	12. Quality control and certification of orthophotoplans in the region of Vakinakaratra, Amoronimania, Menabe
<i>Year :</i>	2007
<i>Place :</i>	Antananarivo
<i>Customer :</i>	MCA (Millennium Challenge Account)
<i>Main lines of the project:</i>	Radiometric quality control and metric precision of Orthophotoplans
<i>Position held:</i>	Responsible for developing the scripts necessary for the controls
<i>Description</i>	■ Image calculation: We read the header of the tiff image to find out the type of tiff and the reading mode of the image pixels. (TAG, STRIP) ■ From the RGB value of each pixel, we bring out the averages of Red, Green and Blue, the standard deviation and the brightness of the image ■ From the coordinate of the center and the size of each image, automatic calculation as a percentage of the overlap between neighboring images horizontally and vertically and display in MapInfo ■ Study of flight trajectography from images ■ Responsible for cartographic designs ■ Creation of MapInfo and Database interface ■ Creating a MapInfo interface in a DELPHI dialog box
<i>Jobs done :</i>	■ Drafting Terms of Reference for networking.

<i>Name of mandate or project:</i>	13. Study of information networking and information processing of electronic land services
<i>Year :</i>	2006 to 2007
<i>Place :</i>	Atsinanana, Boeny and DIANA regions
<i>Customer :</i>	MCA
<i>Main lines of the project:</i>	Production of orthophotos and computerization of Land Services
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Drafting Terms of Reference for networking.

<i>Name of mandate or project:</i>	14. Development of i-Baiboly Bible software
<i>Year :</i>	2006
<i>Place :</i>	Antananarivo
<i>Customer :</i>	FMBM
<i>Main lines of the project:</i>	Production of Bible software in three versions (Protestant, Catholic, DIEM)
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Conversion of biblical texts into database ■ Creation of a quick text consultation interface ■ Creation of multi-criteria search modules ■ Creation of comparison modules for the 3 versions ■ Creation of sermon preparation modules ■ Possibility of inserting notes by adding verses

<i>Name of mandate or project:</i>	15. Establishment of a GIS Database of teachers in EF1 level schools (EPP and FLK)
<i>Year :</i>	2006
<i>Place :</i>	Atsinanana and Haute Matsiatra region
<i>Customer :</i>	UAT Project – EPT/Ministry of Education and Scientific Research
<i>Main lines of the project:</i>	Carrying out surveys and creating a Database
<i>Position held:</i>	Computer Engineer GIS Developer, Trainer and Controller
<i>Jobs done :</i>	■ GIS tools development manager ■ Supervision of data entry work ■ Quality control of data entered. ■ Card output
<i>Description</i>	■ Development of masks to capture information about schools - State of schools - Class census - Entering Teacher Information - Input survey of 10 parents and 20 students per class to evaluate teachers - Entering geographic coordinates ■ Automatic display of schools on BD500 layers ■ Automatic calculation of distances from districts, town halls and school locations ■ Automatic route tracing to schools ■ Development of photo databases for schools ■ Cartographic designs ■ Automating the interface between database and visualization in a geographic information system

<i>Name of mandate or project:</i>	16. Establishment of a GIS Database for the PADANE Project (North East Agricultural Development Support Project)
<i>Year :</i>	2002-2003
<i>Place :</i>	DIANA region
<i>Customer :</i>	IFAD / PADANE Project
<i>Main lines of the project:</i>	Creation of a decision support tool
<i>Position held:</i>	Data warehouse development engineer
<i>Stain Descriptions</i>	■ Development of tools for collecting new information ■ Development of data extraction tools from existing databases or spreadsheets ■ Creating a data warehouse ■ Development of requests according to the needs of the different actors (The project, Lessor, The State, etc.) ■ Automatic calculation of dashboards based on MAP, MAEP, LESSOR indicators ■ Output under Different type: Tables, Maps, Graph, ■ Posted online on the IFAD project Intranet ■ Responsible for cartographic designs ■ Production of thematic maps ■ Creating a bridge between database and GIS

<i>Name of mandate or project:</i>	17. Creation of an electronic document for PADANE (North East Agricultural Development Support Project)
<i>Year :</i>	2002-2003
<i>Place :</i>	DIANA region
<i>Customer :</i>	IFAD / PADANE Project
<i>Main lines of the project:</i>	Creation of WEB PAGEs and development of research tools
<i>Stain Descriptions</i>	■ Inventory of existing documents ■ Categorization by component, history and theme ■ Layout ■ Graphics ■ Development of dynamic page elements with JAVA

<i>Name of mandate or project:</i>	18. Establishment of a GIS Database for the PHBM Project (High Mandrare Basin Project)
<i>Year :</i>	2002-2003
<i>Place :</i>	DIANA region
<i>Customer :</i>	IFAD/PHBM Project
<i>Main lines of the project:</i>	Creation of a decision support tool
<i>Position held:</i>	Integrated and BI database development engineer
<i>Jobs done :</i>	■ Development of an activity database module for each cell ■ Development of an application that integrates all modules by implementing data security systems ■ Development of requests according to the needs of the different actors (The project, Lessor, The State, etc.) ■ Automatic calculation of dashboards based on MAP, MAEP, LESSOR indicators ■ Output under Different type: Tables, Maps, Graph, ■ Posted online on the IFAD project Intranet ■ Connection of the interface and the map (In the map you can make the entry. With the interface, you can see a preview of the map and control the layers) ■ Formation of a geographic information system and ARCVIEW

<i>Name of mandate or project:</i>	19. Madagascar Health Card
<i>Year :</i>	2001
<i>Place :</i>	Madagascar
<i>Customer :</i>	CRESAN Project/ Ministry of Health
<i>Main lines of the project:</i>	
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ GIS tools development manager ■ Development of input masks ■ Development of queries in relation to MINSAN indicators ■ Creation of cards are automatically updated based on input ■ User training in ACCESS and GIS (MapInfo) ■ Development of indicator monitoring tools in MapBasic

<i>Name of mandate or project:</i>	20. Database and GIS
<i>Year :</i>	2001
<i>Place :</i>	Antananarivo
<i>Customer :</i>	Catholic Relief Service
<i>Main lines of the project:</i>	Database and GIS development
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Census of filesmonographs, environmental diagnostics and cultural calendars ■ Database design and modeling ■ Input mask ■ Output interface (Table, Graph and map) ■ Creation of a funding priority support module

<i>Name of mandate or project:</i>	21. Design and Implementation of an information system and procedure manual on behalf of the CNS (National Security Council):
<i>Year :</i>	January 2001
<i>Place :</i>	Madagascar
<i>Customer :</i>	National Security Council - Funded by CARE International MADAGASCAR VAM/SNAP)
<i>Main lines of the project:</i>	Creation of software to process BLU messages
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Collection of information on natural damage (cyclone, drought, etc.), ■ Database Modeling ■ Creation of the input mask and recruitment of input operations ■ Dissemination of information in the form of tables and graphs ■ Carrying out queries and establishing statistical steps ■ Realizationa financing decision support module. ■ Design of the procedure manual and user manual for effective use of the software ■ Training of managers ■ Creation of maps using MAPINFO

<i>Name of mandate or project:</i>	22. Web page development ImasterNet FRANCE
<i>Year :</i>	February 2000
<i>Place :</i>	France
<i>Customer :</i>	ImasterNet
<i>Main lines of the project:</i>	Web Page Development
<i>Position held:</i>	Computer engineer
<i>Jobs done :</i>	■ Contributeto the setting up of the Angers Journal web page, ANGERS (FRANCE) ■ Contribute to the establishment of the E-Book page (Internet book sales). ■ Creating frequently used libraries
